

Climate change and eco-friendly actions at school.

In this slideshow, we are going to show one of the problems related to climate change, the causes of this problem and a feasible action in college related to the problem presented.

By Romain Bruand 4ieme B

Because of men, the trees are disappearing.

- Trees allow us to breathe. But we cut them to make wood, to make room for factories and fields. Sometimes we burn them, to warm ourselves in winter or build houses.

Lots of animals live in the trees

- Trees are important for humans and for animal species: insects use them as a house, while birds and squirrels use them as perches.

Deforestation in 2018: loss of primary forest by country in hectares

Déforestation en 2018 : perte de forêt primaire par pays en hectares

Source : World Resources Institute

- Brazil is the country that destroys the most of its forests.

On my scale: What to do within my college?

- We could plant a tree that grows in record time and can produce up to 4 times more oxygen than others; the Paulownia.
