

Our ecofriendly project :

Reuse rainwater :

- How can we reuse this water ?
- Why should we do this action ?
- When should we start ?

How can we reuse this water ?

- This water can be reused by **filtering** it to make new drinking water.

- **The water recovery school** allows us to recover the water that comes from our roof. It can be connected to our gutters. Water is stored in the school which is equipped with a tank and a filter to filter the water. The water can then be distributed to different places in the school or garden. It can store from 200 liters to 1000 liters of water.

Why should we do this action ?

-The use of rainwater is a good option to **save drinking water**, and therefore limit the ecological footprint of our home.

-We could put rainwater in our toilet so as **not to waste about 9 liters of drinking water by flushing**

- We could put rainwater in our toilet so as **not to waste about 9 liters of drinking water by flushing**

When should we start ?

- We have to start **now**.
- We can do it because **we have the means**.
- We have to do it today because tomorrow it will **be too late**

Made by Léna and Tifanie .

Our project is to create a composter for peelings of the fruits in the canteen

- ▶ Our objective is to recommend to the canteen to create a compartment of composter

- ▶ First ,we could do a trash whitch is different from others to put the waste in this bin.
- ▶ Secondly, students should be respectful of this decision

How can we do this project ?

Positive points

**The waste of fruits
will be recycled**

► **Negatives points**

► What we can do with this fertilizer

Finally be respectful towards the planet
Be ecological !!!

My eco-friendly action is ...

Eat meat one a week

**1kg of meat is equivalent to an emission of
27kg of greenhouse gases**

Our plan is to reduce meat to once a week

For 1 kilo of meat you need

15000 liters of water

To replace the meat we can eat :
vegetables, eggs

Beans,
lentils, broad
beans, peas

Legumes provide as much protein as meat

**With the cook's agreement, we could do
this project next year**

by Valentin and Zacharie

ECOFRIENDLY ACTION FOR THE SCHOOL

PLANTS FLOWERS
IN THE BENCHS AROUND THREES

*We would like to plant
flowers and herbs around the
trees in the benches*

*The students could plant
these flowers with the teachers
of the biodiversity club*

*We only need seeds,
water and earth*

*We could realize
this action as soon
as now*

*This action could bring
biodiversity and colors*

One month without light

And if we turn off
the light for one
month

...

What would be
the benefits ?

Profits ? Our planet !

We can do a lot of things to save our planet and that alone would be a huge step for everyone !

We should turn off the light for the planet !

Turn off the Lights

We can do that right? And if we turn off the lights for one month. Would it be difficult for us ?

Could we use devices other than lights? Yes of course just the lights will be used.

And now a little video on the subject.

This event will take place during a summer month if possible.

And then little by little things like that can become habits.

**The video :
(ctrl + clic)**

**Please turn
off the
light when
not in use**

D

Litter

*We are going to present
you 2 small ideas on litter.
The first idea is to put new
bins in the school ground.
And the second idea is to
organize rotations so that
the school ground is always
clean.*

Before

After

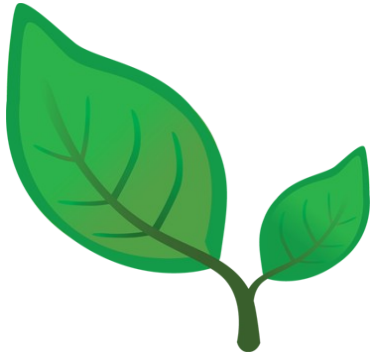

The first idea is to put the bin cans in the school yard to sort waste.

It's time to act now !!!

to preserve our beautiful environment.

Ecofriendly Action

- Our eco friendly action is on "healthy living". We had the idea of making a vegetable garden where the planted food will be given to the canteen.

Who plants the vegetables ?

- A club will be organized where students can plant vegetables (carrots...) and fruits (strawberries...)

When is it happening ?

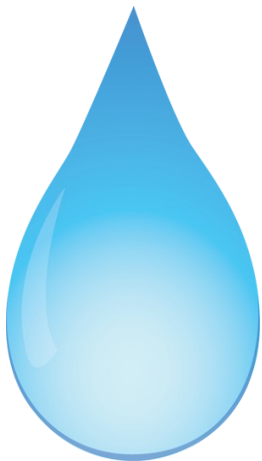

- It could take place during lunchtime, from 12:30 to 13:00. Where everyone is available.

Where is it happening?

- The vegetable garden should be in a recycled greenhouse which will protect the plants from the bad weather. It will be next to the sheep.

Our project : it's to use water filters

We want to use water filters to recycle rain water .

Reusing the rain water is ecofriendly .

Using barrels and filters

Using barrels can save space .

Using filters can allow to recycle rain water .

Reuse the water for animals

- We can reuse the water to give it to the animals.

Biodiversity

Our idea is to make a vegetable garden with a greenhouse.

We can cultivate our fruits and vegetables for the canteen.

Why do we want this?

We want to make a vegetable garden with a greenhouse to reduce the greenhouse effect in the school. With that, we can try to reduce climate change.

Who?

Pupils will plant and water the fruits and vegetables during breaks and study periods.

Where?

The greenhouse will be located next to the canteen.

With that idea, we can eat better and no longer use transport to transport fruits and vegetables.

Biodiversity

We want to build to
insect houses and
plant trees.

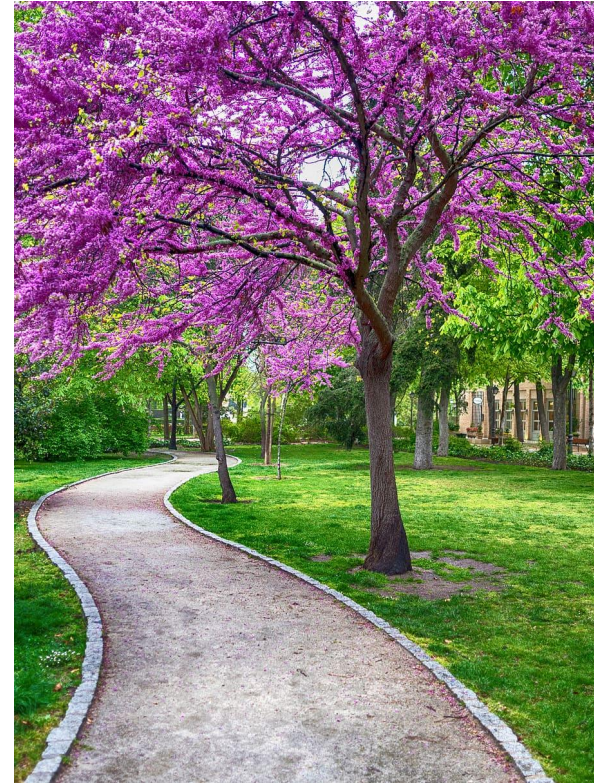

Place insect house

We want to build insect houses next to changing room in the grass.

Place of trees

We want to plant trees next to the insect houses.

Materials to use

flowerpot with straw

wooden log with holes

nails

planks of wood

trees seedling

water

Eco fiendly action by Noemie and Nolwenn

We would like to create a recycling club for not throwing rubbish that can be recycled.

- In this club we could reuse everything we don't use because it's broken or something you can't use anymore .

When and where ?

- The club would be open Monday from 1 p.m to 2 p.m
- Only one hour per week
- The club will be in « the foyer » if possible

The program

- The club will not only be used to sort the waste , but also to reuse the waste in different kinds of uses.
- We will give a second life to waste .
- But also we would like to see videos or documantaries about the planet, the recycling and maybe tutorials to learn more about our planet .

Recycling club

- Thank you for listening and protect our planet please
- **We can all act .**

Our project : Make a hotel for insects

- We would make a hotel for insects for biodiversity at school

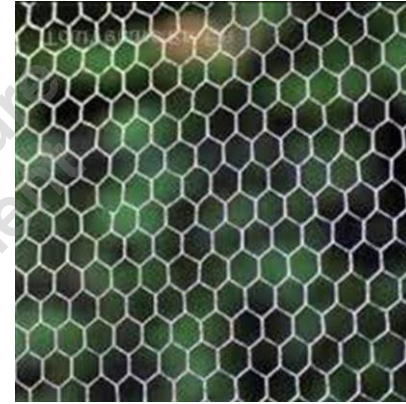

When and who could make the hotel for insects ?

- In the midday, the students make the hotel for insects with a voluntary teacher

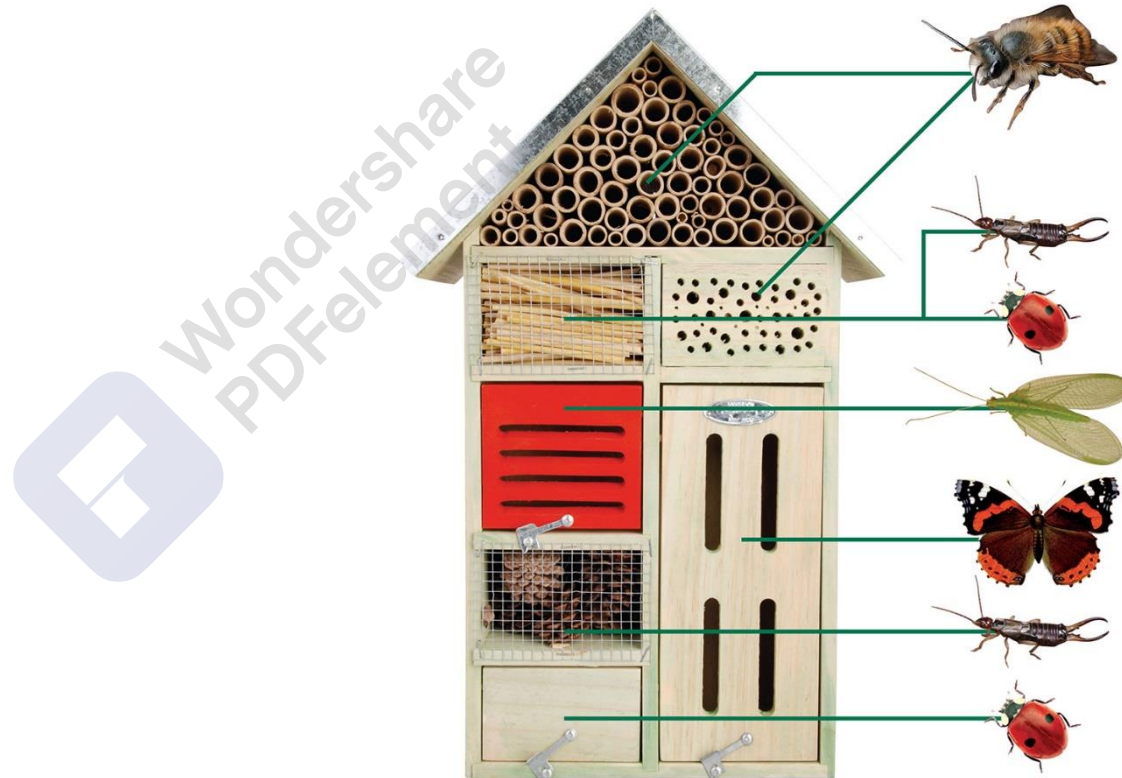

What materials will we need ?

- Will we need :
- Reusable wood
- Mini wire mesh
- Wood chips
- Pine cones

What can it bring to the school ?

- This will bring greater insect biodiversity
- This can protect insects from the weather for exemple

—

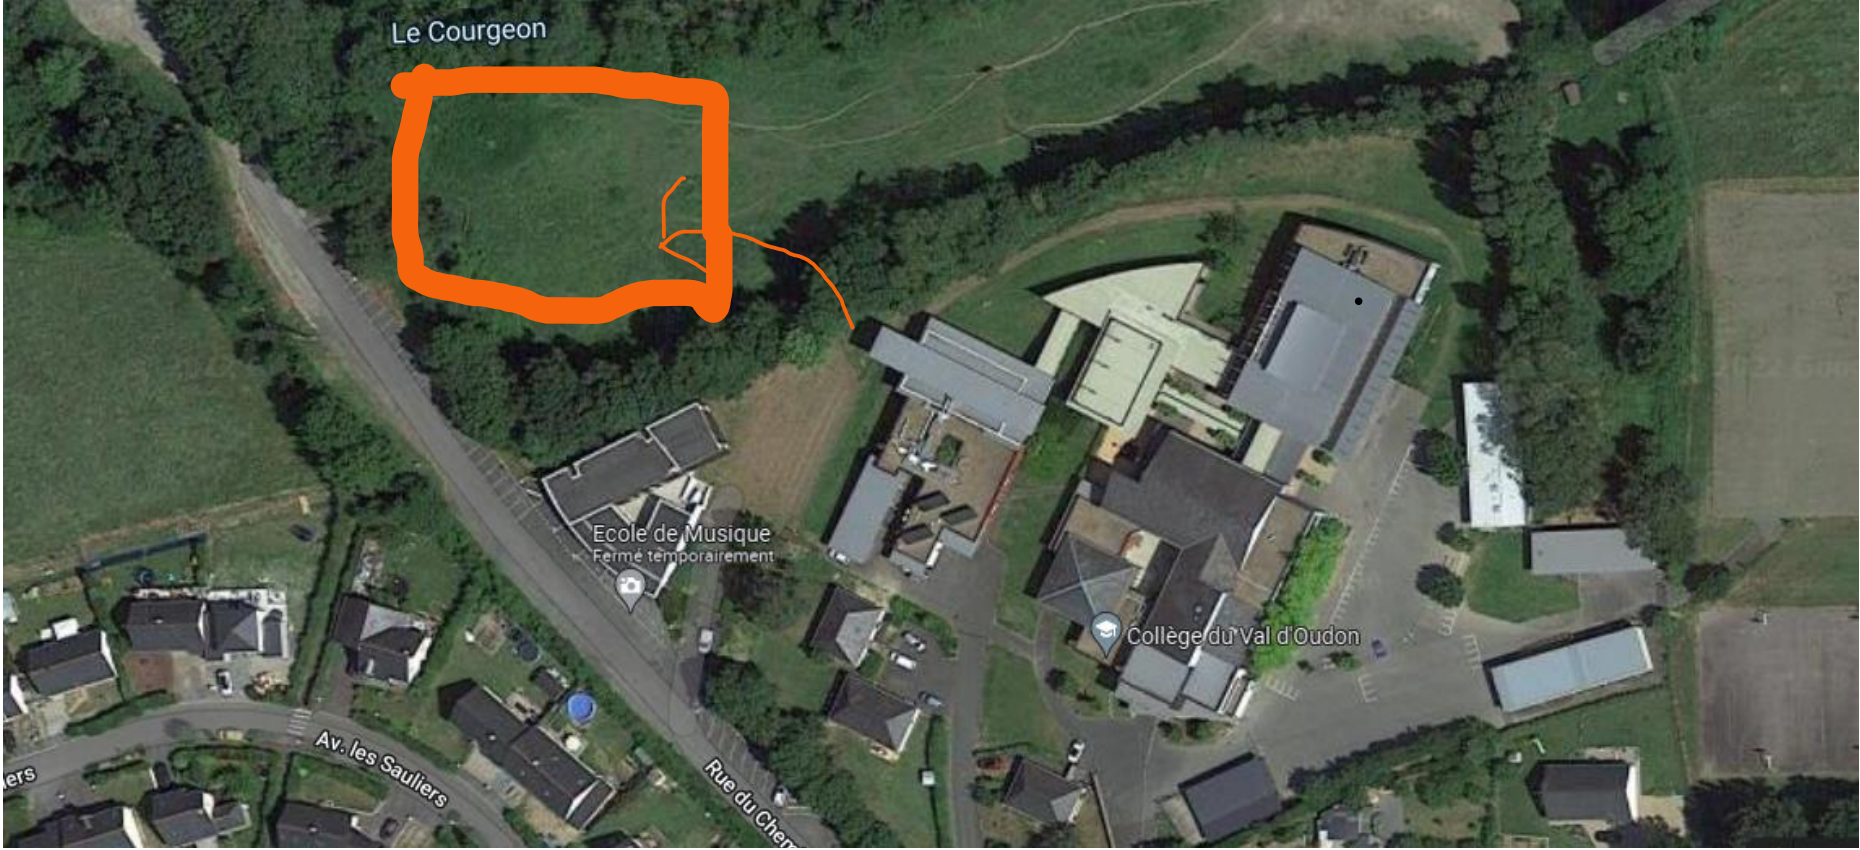

Biodiversity

Our idea is to
make a food
garden for the
school

Food garden

The food garden is possible at this place, next to the canteen.

In the food garden.

In the food garden we could plant vegetables like tomatoes, lettuce, carrots, cucumbers and potatoes, as well as fruits like strawberries, or fruit trees like pear trees, peach trees, apple trees etc....

If everyone had a food garden, we would have better food, and a healthier planet.
